RESEARCH EXPERIENCE

Constraining Dark Matter Profiles with GGSL Measurements

Jan. 2022—Present

Graduate Research Assistant, PI: Priyamvada Natarajan

Yale University

Using galaxy-galaxy strong lensing measurements to constrain cluster subhalo dark matter density profiles.

- *Developed fitting algorithms in Python to find best fit DM profiles to cluster subhalos.*
- *Derived empirical c-M relation, which furthers tension between Λ CDM cosmological simulations and lensing observations on galaxy-scales, and is consistent with overefficient lensing observations.*
- *One paper submitted to ApJ; One paper in preparation.*

Quantifying Selection Effects in Deep-Field AGN Surveys Using BASS

Jul. 2021—Present

Graduate Research Assistant, PIs: Michael Koss, C. Megan Urry

Yale University

Extra-galactic high energy astrophysics. Simulated low-redshift BASS AGN X-ray spectra at higher redshifts to detect bias in Chandra deep field AGN surveys

- *Developed simulation data pipeline to generate Chandra AGN spectra at high redshifts redshifts using Python and XSPEC.*
- *Spectral analysis of 2800 simulated spectra to quantify bias in Chandra-COSMOS Legacy Survey.*

- Paper in preparation; poster presented at the Jan. 2023 meeting of the American Astronomical Society

NuSTAR Group, Columbia Astrophysics Laboratory

Mar. 2020—Dec. 2020

Research Assistant, PIs: Charles Hailey, Kaya Mori

Columbia University

Investigations in galactic high energy astrophysics.

- Timing analysis of NICER observations of AR Scorpii, the only known “white dwarf pulsar” system. Measured spin period to sub- μ s precision; found pulsed non-thermal emission in X-ray band.
- Imaging analysis of NuSTAR observations of the “Eel Nebula” (PWN G18.5-0.4). Revealed synchrotron burnoff effect in the PWN and found evidence of a shock feature. Work published in *ApJ*.
- Spectral and timing analysis of NuSTAR observations of the TeV binary HESS J0632+057. Work published in *ApJ*.

GAPS Group, Columbia Astrophysics Laboratory

Aug. 2019—Feb. 2020

Research Assistant, PI: Charles Hailey

Columbia University

Fabrication, testing, passivation, and assembly of Si(Li) detector array modules to be used in GAPS flight (2022), which aims to detect antimatter evidence of dark matter annihilation in the galactic halo.

Motor Neuron Center, Columbia University Medical Center

Sep. 2013—May 2014

Research Assistant, PI: Christopher Henderson; Supervisor: Dima Yudin

Columbia University

Senior capstone project: ALS pathology in mouse and cell culture models.

- Immunohistochemistry of neuro-muscular junction sites to measure denervation in ALS mouse models over time across the body.
- Optimization of embryonic stem cell-derived motor neuron cultures to determine the effect of various trophic factors.

Lung Perfusion Bioreactor
